

CSE 134B HW2 Report

My website is a portfolio for personal use. It is meant to highlight me as a person and my interests. There are sections for my professional and personal information and work, so someone interested in learning about me for work or for personal reasons can look at their desired content.

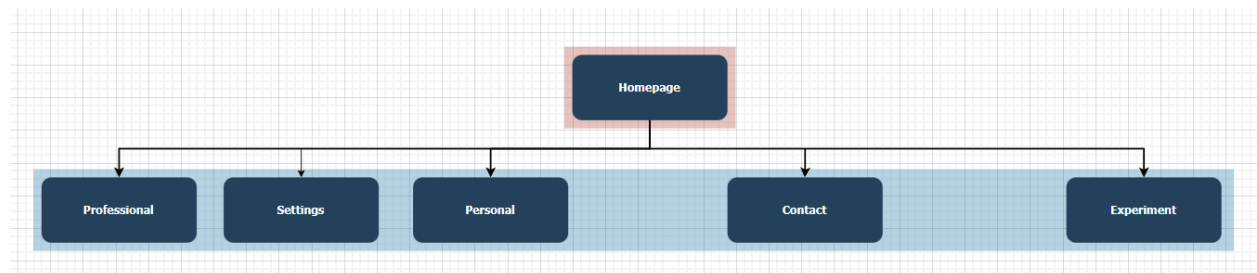

Audience Considerations

While my website can be intended for all sorts of audiences, I think one interesting and valid scenario is for the sake of networking. For example let us consider this user persona:

Here we have Daniel Strand, a recruiter at X. He loves meeting new people and seeing interesting and well-built websites. It is our intended target audience. He understandably does not like cluttered websites. On top of that, he seems frustrated that many portfolios are beginning to look the same (maybe a consequence of rampant AI use). We will consider people like Daniel who may see my portfolio one day for personal or work reasons as we develop our website.

Site Diagram

Technical requirements -

I plan on hosting my website on netlify as we did in Homework 1. I actually really enjoy using netlify, as it lets me deploy my website quickly through github and set up everything smoothly. My target browsers are google chrome, and for devices I expect

most users to be on laptop, as portfolios are not usually viewed on a phone, because of the professional nature. I expect to use heavy javascript in the future, to flex my experience to impress viewers. I will have to think ahead of how not to overwhelm browsers with too much Javascript reliance.

Content requirements - details what type of content you will need to gather or write, this may include any media assets you need. You will not need all this content on the initial build of phase 1. However, by HW3, most content should be in place, so plan accordingly. (6pts)

For this portfolio, I will need to gather my past projects details and media, including videos, github links, photos, and documentation. I expect a heavy reliance on photos and videos for my portfolio, as that is more visually stimulating for viewers.
